

Name

tovcf

Description

Transfroms a csv file to a VCF file.

Dependencies

- [argparse](#)
 - * only if using a Python version < 2.7

Synopsis

usage:

```
tovcf file.csv [-h] [--out output.vcf]
```

Arguments

- `file.csv`: the Excel file converted to a csv file.

Options

- `--out`: the output file to write to. The default is stdout.

Examples

To write the VCF file to stdout simply call

```
tovcf input.vcf
```

If you want to specify the file to write to, simply call

```
tovcf input.vcf --out out.vcf
```

Notes

Since the default behavior is to write to stdout you can also pipe the output to another program or redirect it to a file manually.
